

EXR 158

Multiswitch with 8 connections

Order no.: 20510012

- For distribution of four satellite levels and terrestrial signals to 8 ports
- Only one line is required per receiver (two lines for twin receivers)
- Independent horizontal/vertical, low/high selection from any receiver
- Switching takes place via the coaxial cable with 14/18V and 0/22 kHz signal frequency
- With integrated amplifier for low connection attenuation in the satellite and terrestrial range
- Preemphasis for equalization of cable attenuation integrated
- Reception of the terrestrial range possible even when the satellite receiver is switched off
- High decoupling between outputs
- LNB remote power supply possibility via the input horizontal low. All other inputs are voltage-free (thus operation with UAS 585 possible).
- Low power consumption due to highly efficient, short-circuit-proof switched-mode power supply and power-saving concept (each individual multiswitch branch is supplied by the connected receiver and switched off when the receiver is switched off)
- For indoor installation
- Notice:
For larger installations, the cascable Sat IF distribution system with the components EXR 2508, EXR 2554, EXR 2558 and VWS 2551 is available

Status 08/2023
